

## ABSTRACT

A multi stage mounting printed circuit board system and method is presented.

In one embodiment, a multi stage mounting printed circuit board system includes a  
5 first printed circuit board for mounting electrical components on. A first printed  
circuit board interface component is coupled to the first printed circuit board. The first  
printed circuit board interface component communicatively couples the first printed  
board to a second printed board via a second printed circuit board interface  
component. A plurality of printed circuit board extractors are coupled to the first  
10 printed circuit board. The plurality of printed circuit board extractors couple the first  
printed circuit board to card guides (e.g., a single pair of card guides in which the  
second printed circuit board is mounted).
